Cloud Transition vs project phases

Transition to cloud is related with several activities which must be fulfilled to complete the process successfully. According to Sollers approach, we distinguish 4 stages: Cloud Readiness Check, Gap Analysis, Configuration upgrade and GW Cloud Deployment.

1 Cloud Readiness Check

- Product alignment
- Solution design
- Codebase quality
- Security impact
- Performance testing
- Logging and Monitoring
- Business case

2 Gap Analysis

- Detailed assessment
- Recommendations
- Complete optimization backlog
- Project organization and workplan

3 Configuration upgrade

- Features alignment
- Solution design
- Codebase repair
- Database consistency
- Security configurations
- Other configurations

4 GW Cloud Deployment

- Data migration
- API configuration
- Security configuration

5 Successful Guidewire Cloud Transition

We would be delighted
to stay in touch!

As an independent business advisor, Sollers Consulting develops a tailor-made Cloud Business Case in close collaboration with the client to reveal the opportunities and business values of the Cloud. We use our domain and cloud expertise to support insurers and banks in developing a customised cloud architecture and transformation strategy. Our experienced cloud architects and consultants will thoroughly monitor and assess cloud readiness and provide a roadmap for infrastructure deployment plans. Sollers Consulting supports the development and self-sustainability of the client's teams with the right tools and skills to manage an ever-evolving cloud infrastructure.
